

### **In the Abstract**

***Kindly replace the Abstract with the following:***

~~The present invention relates to a~~A process and a system for the secure distribution of digital  
~~audiovisual streams. A separation of the~~according to a standard, normalized or proprietary format  
~~including separating an original~~stream into two parts in order to generate, transmitting the parts to  
~~addressee equipment, generating a modified main stream with the~~having a format of the original  
~~stream and to generate complementary information of~~with any format comprising theincluding  
~~digital information suitable for allowing the~~to permitreconstruction of the original stream is carried  
~~out prior to the transmission to the addressee's equipment.~~

~~— This modified main stream is transmitted, and transmitting the modified stream~~from a  
~~distribution server via separate paths during the distribution phase and the complementary~~  
~~information is transmitted in unicast mode~~in an extended, secure multicasting modeto the  
~~addressee's equipment from a secure central server passing through~~viaat least one router and at least  
~~one switch connecting this~~the addressee's equipment to thisthe central server via at least one access  
~~point.~~
